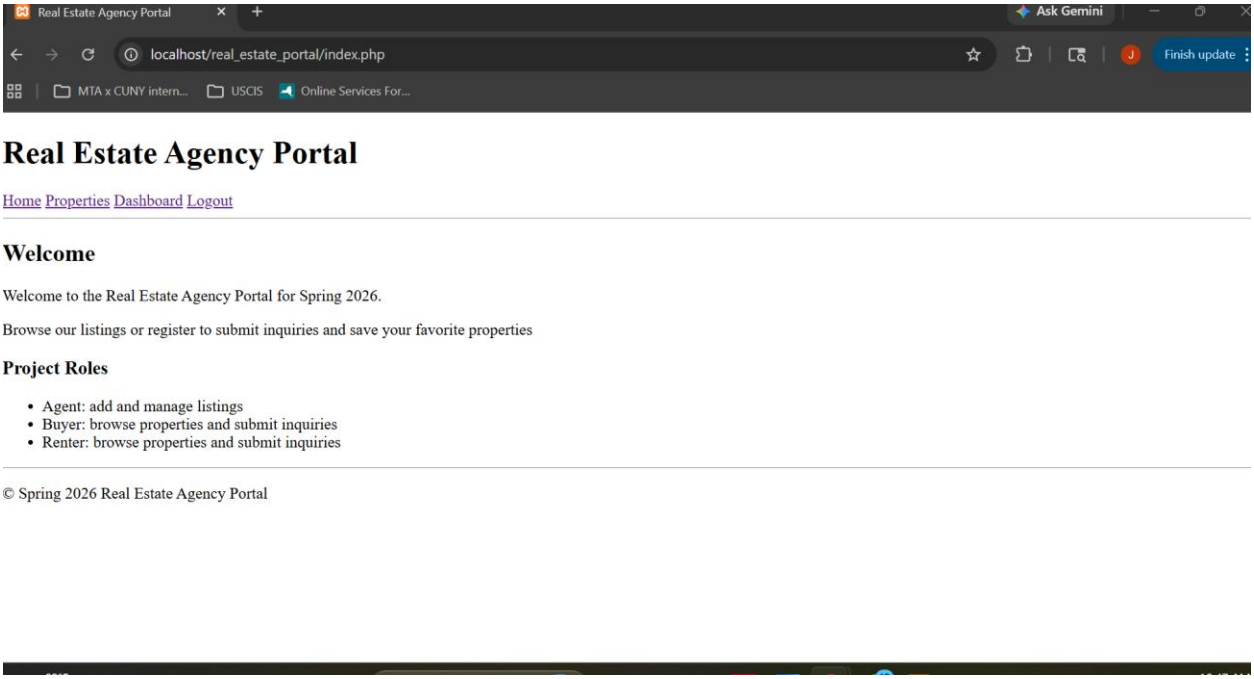
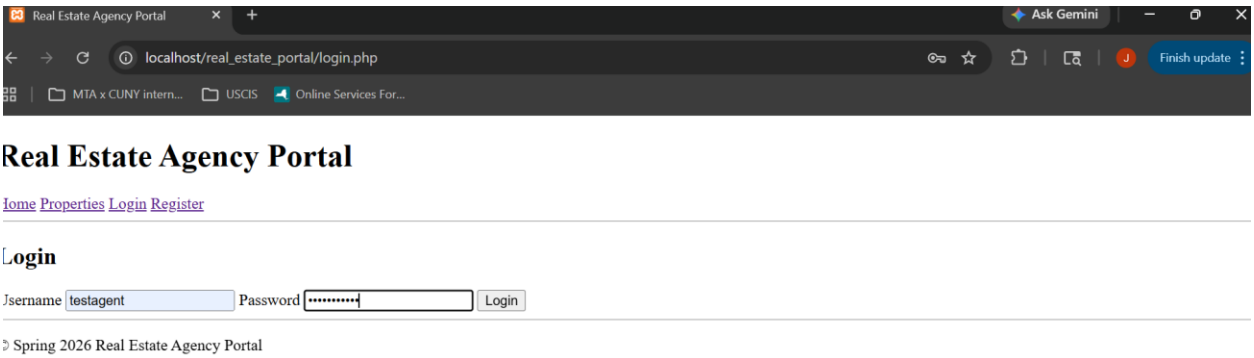
This is my home page for the Real Estate Agency Portal. To get to it I must start the server in Xampp.

Then I open a web browser and type http://localhost/real_estate_portal/index.php



Here is a snapshot of logging into an account I register earlier.



Once logged in as an agent you can add properties.

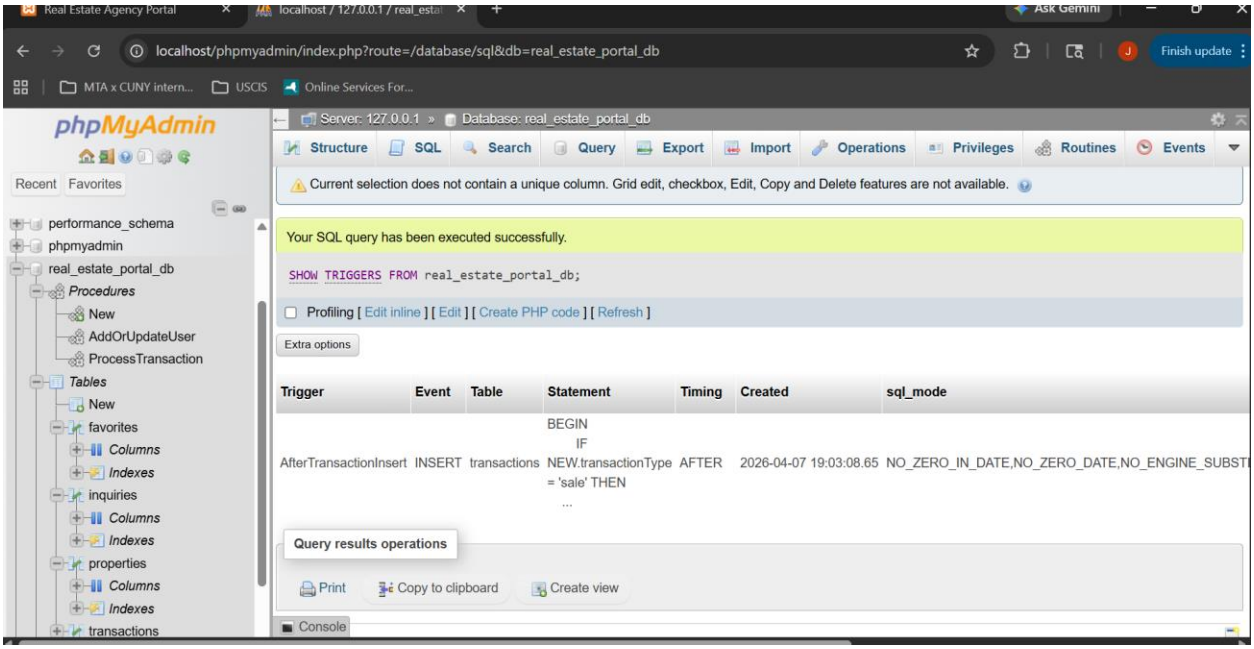
Here I'm showing a procedure which is a set of stored instructions in my database.



Here is a trigger; a trigger happens automatically. So, every time a property is sold or rented, the status of the property is updated.
